STEP-BY-STEP GUIDE

Preview Azure Container Apps Changes Fast

Use PowerShell and Azure Developer CLI

Always verify these commands with your L3 or L4 before production implementation.

What You Need

- Azure Developer CLI installed on your machine
- PowerShell 7 or later
- An active Azure subscription with permissions

STEP 1

Install and Login to Azd

Verify your developer CLI installation

Authenticate with your Azure account

PowerShell / CMD

```
azd version
azd auth login
```

STEP 2

Initialize Your Project

Navigate to your source code directory

Set up the environment configuration

PowerShell / CMD

```
Set-Location C:\Projects\MyApp
azd init
```

STEP 3

Configure Environment Variables

Set target environment name

Define your container app parameters

PowerShell / CMD

```
azd env new dev
azd env set AZURE_ENV_NAME dev
```

STEP 4

Deploy Preview Infrastructure

Run preview deployment using PowerShell

Review resource changes before applying

PowerShell / CMD

```
azd provision --preview
azd deploy --preview
```

Verify It Worked

Check the Azure portal for preview container apps

Confirm outputs return active endpoint URLs
