STEP-BY-STEP GUIDE

Audit Entra ID Risky Service Principals with PowerShell

Secure your AI agent permissions

Always verify these commands with your L3 or L4 before production implementation.

What you need

- Windows PowerShell or PowerShell 7
- Microsoft.Graph module installed locally
- Global Reader or Privileged Role Administrator role

Suneel Kumar

STEP 1

Connect to Microsoft Graph

Connect with read-only permissions for safety

Requires Global Reader role or higher

PowerShell / CMD

```
Connect-MgGraph -Scopes
"Application.Read.All"
```

Suneel Kumar

STEP 2

Find service principals with app roles

Retrieve service principals assigned application roles

Filter results to inspect high risk permissions

PowerShell / CMD

```
Get-MgServicePrincipal -All |
  Where-Object {$_.AppRoleAssignments -ne
  $null}
```

Suneel Kumar

STEP 3

List high privilege permission grants

Query OAuth2 permission grants for delegated access

Check for sensitive scopes like Directory.AccessAsUser.All

PowerShell / CMD

```
Get-MgOauth2PermissionGrant -All
```

Verify it worked

Review the console output for unexpected application roles

Confirm no service principal has unmonitored admin access

Run Get-MgContext to verify active session details
