TROUBLESHOOTING GUIDE

Fix Windows Server Printing Issues Fast

Resolve post update print failures

The printing symptoms

Printers stop responding after installing November security updates

Print jobs get stuck in the active queue

Applications crash when attempting to print documents

Suneel Kumar

STEP 1

Restart the print spooler service

Open the services management console on your server

Locate the print spooler service in the list

Right click the service and select restart

Suneel Kumar

STEP 2

Clear stuck print jobs

Stop the print spooler service to release file locks

Navigate to the printer folder in system directories

Delete any leftover files in the printer queue folder

STEP 3

Update the printer driver

Open printer properties from the management console

Check the current driver version installed on the server

Install the latest manufacturer recommended driver version

STEP 4

Uninstall the problematic update

Open installed updates in your system settings

Identify the recent November security update package

Select uninstall and restart the server when prompted

Verify it worked

Send a test print job to the affected printer

Confirm the job completes without pausing in the queue

Verify applications can print successfully without crashing
