IMPLEMENTATION GUIDE

Stop SonicWall SSL-VPN MFA Bypass Exploits Now

Secure remote access against modern threats

Suneel Kumar

The security risk

Attackers bypass weak MFA implementations on VPN portals

Misconfigured local users skip secondary authentication steps

Immediate hardening prevents unauthorized network entry

Swipe for the next step

Suneel Kumar

STEP 1

Access local users

Log into the SonicWall management console

Navigate to the local users and groups configuration menu

Suneel Kumar

STEP 2

Enforce MFA globally

Open user settings or default group settings

Select the option to require two-factor authentication for all users

Suneel Kumar

STEP 3

Disable untrusted bypass methods

Check SSL-VPN server settings for allowed authentication methods

Remove legacy protocols that do not support secondary challenges

STEP 4

Apply and save changes

Review the updated authentication policy settings

Save the configuration to activate the security rules

Verify it worked

Test a standard user login via the SSL-VPN portal

Confirm that the second factor prompt appears without exception

Stay secure
