STEP-BY-STEP GUIDE

Reset Active Directory Passwords Fast With PowerShell

A simple guide for IT administrators

Always verify these commands with your L3 or L4 before production implementation.

What you need

- Remote Server Administration Tools installed
- ActiveDirectory PowerShell module available
- Account permissions to reset user passwords

STEP 1

Import the Active Directory module

Load the module into your session

Required before running AD cmdlets

PowerShell / CMD

```
Import-Module ActiveDirectory
```

Suneel Kumar

STEP 2

Prepare the secure password string

Convert plain text into a secure string

Required input type for password cmdlets

PowerShell / CMD

```
$password = Read-Host -AsSecureString
```

STEP 3

Reset the user password securely

Apply the new password to the user

Uses the ActiveDirectory module

PowerShell / CMD

```
Set-ADAccountPassword -Identity
<username> -NewPassword $password
-Reset
```

STEP 4

Force password change at next logon

Require user to update credentials on login

Enhances overall security posture

PowerShell / CMD

```
Set-ADUser -Identity <username>
  -ChangePasswordAtLogon $true
```

Verify it worked

Run Get-ADUser to check account status

Command: Get-ADUser -Identity <username> -Properties ChangePasswordAtLogon
