STEP-BY-STEP GUIDE

Stop rogue CrowdStrike agents using the AI kill switch

A practical guide for IT admins

What you need

- Falcon console administrator access
- Target endpoint device IDs or host groups
- Appropriate change management approval

Suneel Kumar

STEP 1

Access the Falcon console

- Log in to your CrowdStrike Falcon portal
- Navigate to the endpoint security configuration menu
- Locate your active prevention policies

Suneel Kumar

STEP 2

Locate machine learning settings

Open the specific prevention policy applied to the rogue agent

Scroll down to the machine learning and AI sections

Review current slider thresholds for sensor sensitivity

Suneel Kumar

STEP 3

Adjust AI strictness levels

Lower the machine learning strictness slider for the target group

Disable specific automated prevention rules causing false positives

Save policy changes to push updates to the cloud

Verify it worked

Check the audit log in the Falcon console for policy update success

Confirm endpoint telemetry shows updated prevention settings applied

Validate that blocked applications launch successfully on the target host

Common mistakes

Disabling all security controls instead of adjusting AI thresholds

Applying global policy changes without testing on a pilot group

Forgetting to document the override for future security audits
