TROUBLESHOOTING GUIDE

Fix Windows 11 RDP Error 0xC000000D

Step by step PowerShell troubleshooting guide

Always test these commands in a test environment before using them in production.

The Error Symptoms

Remote Desktop connection fails immediately.

Error code 0xC000000D appears on screen.

Local network and credentials are correct.

STEP 1

Check Remote Desktop Service

Verify the TermService is running.

Ensure startup type is set to automatic.

PowerShell / CMD

```
Get-Service -Name TermService
Set-Service -Name TermService
   -StartupType Automatic
```

STEP 2

Verify RDP Port Listening

Confirm port 3389 is listening for traffic.

Check local firewall rules for remote desktop.

PowerShell / CMD

```
Test-NetConnection -ComputerName
  localhost -Port 3389
Get-NetFirewallRule -Name *RemoteDesktop*
```

STEP 3

Reset TCP IP Stack

Corrupted network stacks can trigger RDP faults.

Reset IP stack using netsh via PowerShell.

PowerShell / CMD

```
netsh int ip reset
netsh winsock reset
```

Verify It Worked

Restart your Windows 11 machine.

Test remote connection from another device.

Confirm error 0xC000000D is gone.
