STEP-BY-STEP GUIDE

Stop clicking through server manager

Manage roles and features with PowerShell

Always verify these commands with your L3 or L4 before production implementation.

Suneel Kumar

What you need

- Windows Server with PowerShell
- Administrator privileges
- Remote access if managing remotely

STEP 1

Find available server roles

List all available server roles and features

Check the installation state of a specific feature

PowerShell / CMD

```
Get-WindowsFeature
Get-WindowsFeature -Name Web-Server
```

Suneel Kumar

STEP 2

Preview role installation safely

Use WhatIf to test installation without making changes

Confirm no system modifications occur during the preview

PowerShell / CMD

```
Install-WindowsFeature -Name Web-Server
   -WhatIf
```

STEP 3

Install a server role

Install the web server role on the local machine

Include management tools during the installation

PowerShell / CMD

```
Install-WindowsFeature -Name Web-Server
  -IncludeManagementTools
```

Verify it worked

Run Get-WindowsFeature to check installation status

Confirm the InstallState property shows Installed
